

## CLAIM AMENDMENTS

1. (Currently Amended) A cleaning apparatus comprising:

a rotatable roll assembly including

a wound roll with outward facing adhesive surfaces, the roll formed of a plurality of separable sheets, each defined by an edge separable from an adjacent sheet;

a roll support element rotatably supporting the roll assembly; and

first means, carried on ~~at least one of~~ the roll assembly and second means carried on the roll support element, said first and second means releasably engageable with one another only when said roll assembly is at a specific rotatable position relative to said support element for rotatably orienting the edge of each sheet, as the edge of each sheet becomes the outermost edge of the roll, in at a predetermined orientation on angular location relative to the support.

(Claims 2-7 Cancelled)

8. (Currently Amended) The apparatus of claim 1 wherein:

the support element includes a handle and a spindle axially fixedly extending from the handle, and the roll assembly includes a rotatable member rotatably mounted on the spindle, the roll mounted on the rotatable member; and

the ~~orientating~~ first means includes a projection on the handle ~~one of the handle and the rotatable member,~~

and the second means includes spaced members carried on the ~~other of the handle on~~ rotatable member and defining ~~the~~ a channel for receiving the projection to releasably lock the rotatable member from rotation with respect to the handle.

(9-29 Cancelled)

30. (Currently Amended) The apparatus of claim 1, wherein the ~~roll~~ support element comprises: ~~a handle; and the roll assembly includes~~

a spindle; and

means carried on the handle and the spindle, for rotatably coupling the spindle to the handle.

31. (Currently Amended) The apparatus of claim 30 wherein the ~~orienting means comprises:~~ said first and second means comprises:

a stop carried on one of the handle ~~in~~ and the spindle; and

an arm carried on the other of the handle and the spindle and rotatably ~~engagable~~ engageable with the stop ~~at the orientation of the point.~~

32. (Currently Amended) The apparatus of claim 1, wherein the separable edge of each of the plurality sheets in the ~~round~~ roll are radially aligned.

33-47 (Cancelled)

48. (Currently Amended) The apparatus of claim 1, wherein the roll assembly includes support ~~comprises~~ a rotatable spindle.

49. (Previously Presented) The apparatus of claim 48, wherein said spindle includes at least one rotatable collar for engaging said wound roll.

50. (Previously Presented) The apparatus of claim 49, wherein said at least one collar comprises a pair of opposed rotatable spaced collars with a carriage formed of a plurality of straps rotatably located therebetween.

51. (Currently Amended) The apparatus of claim 49, wherein said ~~orienting~~ first means comprises at least one stop member fixedly carried on said at least one collar.

52. (Previously Presented) The apparatus of claim 51, wherein said at least one stop member comprises a pair of stop members carried on said at least one roller for defining a channel therebetween.

53. (Currently Amended) The apparatus of claim 52, wherein said support element includes ~~further including~~ a handle extending from said rotatable spindle.

54. (Currently Amended) The apparatus of claim 53, wherein said handle carries said second means defined as a latch member releasably engageable in said channel.

55. (Previously Presented) The apparatus of claim 54, wherein both said stop members and said latch member are rounded in form to facilitate engagement and disengagement of said latch member in said channel.

56. (Currently Amended) The apparatus of claim 48, wherein said ~~orienting~~ first means comprises a stop member carried on said spindle.
